Y11 T5 W1: B3 – Menstrual Cycle

Visit the BBC Bitesize link: www.bbc.co.uk/bitesize/guides/z9btrwx/revision/5

Question	Answer
What is the 'menstrual cycle'?	A monthly cycle during which a female's body prepares for pregnancy.
How long does the menstrual cycle last?	28 days.
What occurs during days 1-4?	The uterus lining sheds. This is called menstruation (a period).
What occurs during days 4-14?	The uterus lining thickens.
What occurs on day 14?	An egg is released from the ovaries. This is called ovulation.
What occurs during days 14-28?	The uterus lining remains thick, in case the egg becomes fertilised.
What is the role of FSH?	Causes the egg to mature.
What is the role of oestrogen?	Causes the uterus lining to thicken.
What is the role of LH?	Causes the release of the egg (ovulation).
What is the role of progesterone?	Maintains the thickness of the uterus lining.

Question	Answer
What is the role of progesterone?	
How long does the menstrual cycle last?	
	The uterus lining sheds. This is called menstruation (a period).
What occurs during days 4-14?	
What is the role of oestrogen?	
	Causes the egg to mature.
	The uterus lining remains thick, in case the egg becomes fertilised.
What occurs on day 14?	
	Causes the release of the egg (ovulation).
	A monthly cycle during which a female's body prepares for pregnancy.

Exam Question:

The diagram shows the changes that occur to female hormone concentrations in the blood during the menstrual cycle.

- i. Which line represents the hormone **progesterone**?
Choose from **A, B, C or D**

_____ [1]

- ii. Explain your answer to part (i).

_____ [1]

- iii. Describe the role of progesterone in the menstrual cycle

_____ [1]

Y11 T5 W2: B4 – Ecosystems

Visit the BBC Bitesize link: www.bbc.co.uk/bitesize/guides/zw6wgdm/revision/5

Question	Answer
Define 'ecosystem'	All the living organisms and non-living factors in an area.
What is a 'producer'?	An organism that produces its own food e.g. plants
What is a 'consumer'?	An organism that eats other organisms for energy e.g. animals
What is a 'decomposer'	An organism that feeds on dead or decaying material for energy e.g. bacteria or fungi.
What is a biotic factor? Give 2 examples.	A living factor. E.g. Number of predators, number of bacteria
What is an abiotic factor? Give 2 examples.	A non-living factor. E.g. soil pH and temperature.
What do animals compete for?	Food, water, space (territory), shelter, breeding partners
What do plants compete for?	Light, minerals, carbon dioxide, water, space.
What is predation?	When an animal (predator) hunts and eats another animal (prey).
What is a mutualistic relationship? Give an example.	A mutualistic relationship is when both organisms benefit from each other another. E.g. Oxpecker and buffalo – the oxpecker eats the fleas off the buffalo.
What is a parasitic relationship? Give an example.	A parasitic relationship is when only one organism benefits and the other organism is harmed. E.g. Fleas living on other animals.

Define 'ecosystem'	
	An organism that produces its own food e.g. plants
	An organism that eats other organisms for energy e.g. animals
What is a 'decomposer'	
What is a biotic factor? Give 2 examples.	
	A non-living factor. E.g. soil pH and temperature.
What do animals compete for?	
What do plants compete for?	
	When an animal (predator) hunts and eats another animal (prey).
What is a mutualistic relationship? Give an example.	
What is a parasitic relationship? Give an example.	

Exam Question:

Q1. Which statement best describes an ecosystem?

- A. A community of organisms and the abiotic factors affecting them.
- B. A group of organisms of the same species living together in the same habitat.
- C. The position occupied by an organism within a community.
- D. The total population of organisms living in a habitat.

Your answer

Q2. Farmers grow sugar beet plants in large fields.

They try and stop weeds growing in between the sugar beet plants.

One way to do this is by adding chemicals to kill the weeds.

Explain why removing weeds makes sugar beet plants grow bigger.

Y11 T5 W3: C1 - Atomic Structure and Isotopes

Visit the BBC bitesize link: www.bbc.co.uk/bitesize/guides/z2qq4qt/revision/1

Question	Answer
What is the mass of a proton?	1
What is the mass of a neutron?	1
Define 'atomic number'	The number of protons in the nucleus of an atom.
Define 'relative atomic mass'	The number of protons and neutrons in the nucleus of an atom.
How do you calculate the number of protons in an atom?	Number of protons = atomic number
How do you calculate the number of neutrons in an atom?	Number of neutrons = (relative atomic mass – atomic number)
Define an isotope.	Atoms of the same element with the same number of protons but a different number of neutrons.
Why do isotopes of an element have the same atomic number?	Isotopes have the same atomic number because they have the same number of protons.
Why do isotopes of an element have different relative atomic mass numbers?	Isotopes have a different relative atomic mass because they have a different number of neutrons.
Why is ${}^6\text{C}_{13}$ an isotope of ${}^6\text{C}_{12}$?	${}^6\text{C}_{13}$ and ${}^6\text{C}_{12}$ have the same number of protons (they both have an atomic number of 6) but different number of neutrons (they have a different relative atomic mass).
Why is ${}^6\text{C}_{12}$ <u>not</u> an isotope of ${}^7\text{C}_{12}$?	Isotopes have the same number of protons but a different number of neutrons. ${}^6\text{C}_{12}$ and ${}^7\text{C}_{12}$ have a different number of protons (hence a different atomic number). This means that they are in fact different elements. An atom with an atomic number of 7 is nitrogen, not carbon.

Why is ${}^6\text{C}_{12}$ <u>not</u> an isotope of ${}^7\text{C}_{12}$?	

Exam Question:

1. An atom has both an **atomic number** and a **mass number**.
What do these **two** terms mean?

[2]

2. An atom of chlorine can be represented as

Different **isotopes** of chlorine exist.

Nick thinks the following are three isotopes of chlorine.

Only one is correct. Which one?

Y11 T5 W4: P5 – Waves

Watch the YouTube Video: www.youtube.com/watch?v=aCu4VRKMstA

Question	Answer
What is a transverse wave?	A wave in which the particles vibrate at 90° to the direction of energy transfer.
Give an example of a transverse wave.	Light and water.
What is a longitudinal wave?	A wave in which the particles vibrate parallel to the direction of energy transfer.
Give an example of a longitudinal wave.	Sound.
What is a peak?	The very top of a wave.
What is the trough?	The very bottom of a wave.
Define 'wavelength'	The distance between two identical points on a wave e.g. peak to peak.
Define 'frequency'	The number of waves which pass a point in one second.
Define 'amplitude'	The distance from the middle of the wave to the peak or trough of the wave. In other words, half the height of the wave.
Define 'time period'.	The time it takes for one wave to pass a given point.
What equation links wave velocity, frequency and wavelength? State the units.	Wave velocity (m/s) = frequency (Hz) x wavelength (m)

Exam Questions:

Diagram 1 shows two waves.

- (i) Name **one** wave quantity that is the same for the two waves.

(1)

- (ii) Name **one** wave quantity that is different for the two waves.

(1)

- (iii) The waves in **Diagram 1** are transverse.

Which **one** of the following types of wave is **not** a transverse wave?

Draw a ring around the correct answer.

gamma rays

sound

visible light

(1)
